

AI that works in **your** **business**, not just in a demo

We help organizations move AI from experiment to impact by integrating it into real workflows, building real solutions, and training real people.

THE REALITY

Most organizations are stuck

88% of organizations use AI in at least one function. Only 5% realize significant value from it. The gap between adoption and operationalization is where most companies live right now.

Pilot purgatory

Impressive POCs that never make it to production. Teams demo well but nothing changes day to day.

The execution gap

Software gets purchased but never integrated into real workflows. Adoption stalls because the work was never redesigned around it.

No measurable ROI

Leadership invested in AI but can't point to outcomes. Without clear metrics, momentum dies and budgets get cut.

HOW WE THINK ABOUT AI

Three levels of AI transformation

L1

Individual Productivity

Enhancing individual work with tools like ChatGPT, Claude, and Copilot. Low investment, immediate personal productivity gains.

L2

Workflow Automation

Team or department-level process automation: custom integrations, automated reporting, and document processing pipelines.

L3

Custom Applications

Bespoke AI-powered applications: custom agents, proprietary models, and enterprise integrations.

10,000+

employees trained

1,000+

use cases discovered

100+

custom solutions built

SERVICES

How we engage

- **AI Embed:** We fly one of our people in to sit side-by-side with your team for 1 to 3 days. They leave fluent in the AI tools that fit their actual workflows.
- **AI Readiness Audit:** Assess your current state, identify gaps, and understand where AI can have the most impact. Typically 2 to 4 weeks.
- **Corporate AI Education:** Structured training from foundations to advanced workflows. Interactive workshops, live demos, and hands-on sessions for teams of any size.
- **Use Case Discovery:** Our discovery discipline identifies the right problems before building solutions. We decompose workflows and separate AI problems from non-AI problems.
- **Point Solutions:** Targeted L2 workflow automations: document processing, automated reporting, integration workflows, and department-specific AI tools.
- **AI Engineering:** Custom L3 application development: bespoke AI-powered products, agent systems, enterprise integrations, and proprietary solutions.
- **AI Diligence:** For M&A and investment contexts: evaluating AI capabilities, risks, and opportunities in target companies.
- **Full AI Transformation:** End-to-end partnership: strategy, governance, operating model design, change management, and ongoing advisory.

WHAT CLIENTS SAY

“Our gross margins have gone from 48% to 74% in the past two years, in part driven by AI Transformation and all of the tools Brandon has created department by department.”

Brett Hurt, Co-Founder and CEO, data.world
(acquired by ServiceNow)

“Working with Gadoci Consulting has been a game-changer. They’re smart, collaborative, and fully engaged in understanding our needs. They don’t just deliver solutions; they transform how your team thinks and works.”

Director of Growth & Strategy, Government Services

WHY GADOCI

What sets us apart

Most AI consultancies lead with technology. We lead with discovery. Before we recommend anything, we invest real time understanding how your business actually operates, where the friction is, and what your people need. That discipline is what separates a solution that gets used from one that gets shelved.

We are practitioners, not just advisors. Our team builds the tools, runs the training, and sits alongside your people until AI is part of how they work. We focus on operationalization: making sure AI delivers measurable business outcomes, not just impressive demos.

The result is an approach that scales. Organizations that work with us don’t just adopt AI. They build the internal muscle to keep going after we leave.
